IN THE ABSTRACT:

Please replace the Abstract at page 106 with the following amended paragraph.

Defect-free printing is achieved by previewing on a display, prior to printing, document data and finishing information of a physical page to be printed. The preview is displayed with the finishing position information on the physical page in the same display window as the document data. ~~device functions and print specifications. Preview of double-sided faces is concurrently provided when double-sided printing is specified. Display is performed by generation of data which allows print preview that reflects consideration of device information and document data. Data is generated for perspective-reverse-face preview when page-specification information is set for double-sided faces.~~
